

VFX CONTROL

Mix Video like Music

VFX CONTROL is a complete package to mix video and music files at a glance, thanks to powerful software and a complete MIDI controller featuring a built-in 3 stereo outputs soundcard.

It emulates a standard DJ booth including 2 players and a central mixer, coupled with a powerful VJ tool allowing the most amazing effects and transitions, working in sync with your videos and your music.

Audio & Video Effects, Titling and Animation

MixVibes' reliable VFX software not only supports most music and video file formats, but also lets you add exclusive content to your performance.

- The integrated video titler allows you to add flash texts and animations, visuals and logos and also texts with animations.
- Each audio effect is translated into a visual effect, so that visual effects can be synced to audio.
- The program even lets you display live video camera feeds !

Touch-sensitive jog wheels and built-in Soundcard

The supplied MIDI controller was designed to be light and mobile. It fits easily in installations such as bars, clubs or restaurants (19" rack), and comes with a built-in soundcard featuring 2 separate outputs and an extra headphone output for monitoring.

For high precision mixing, the 2 touch-sensitive jog wheels will perfectly adjust the BPM (pitch bend) or scratch your music and video files without any latency.

VFX Software Features :

- Artwork cover browsing
- Over 20 effects (audio, video or audio + video)
- Effect synchronization on music beat/tempo
